IOM Yemen DTM's Rapid Displacement Tracking (RDT) tool collects data on estimated numbers of households (HHs) forced to flee on a daily basis from their locations of habitual residence or displacement, allowing for regular reporting of new displacements in terms of estimated numbers, causes of displacement, geography and needs. It also reports IDP returnees who returned to their location of habitual residence.

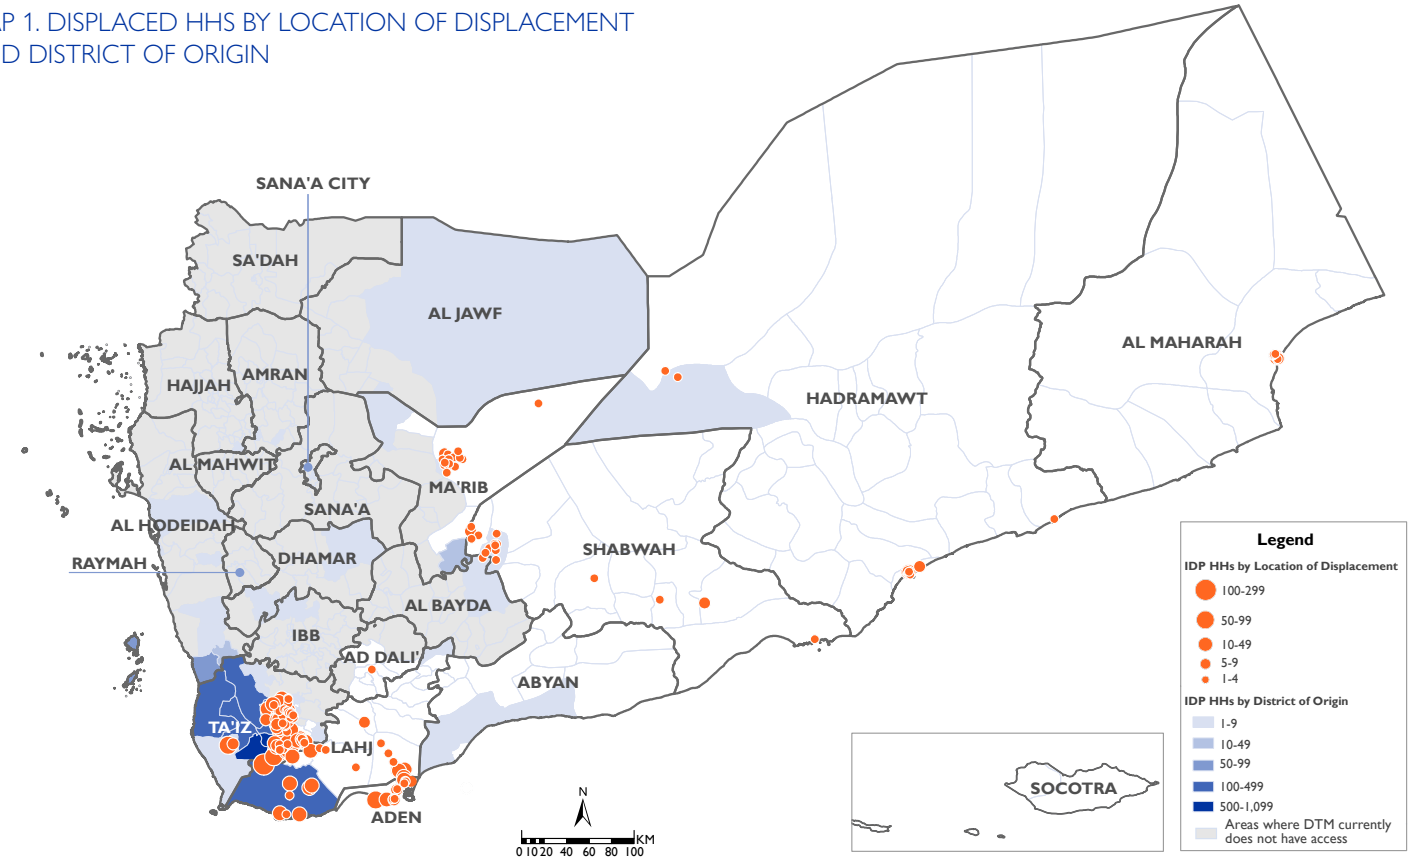

174,145 Individuals
29,023 Households
Total IDPs recorded due to conflict escalation in the West Coast, between 1 August – 3 October 2026[1]

21,798 Individuals
3,633 Households
Total IDPs recorded during reporting period, 27 September to 3 October 2026

191,064 Individuals
31,844 Households
Total IDPs recorded this year, from 1 January to 3 October 2026

Following the conflict escalation in the West Coast of Yemen, DTM records an approximate of 174,145 individuals (29,023 households)[2] IDPs between 1 August to 3 October 2026. During this reporting period itself, from 27 September to 3 October 2026, the team recorded 21,798 individuals (3,633 HHs) displaced at least once, representing a 26 per cent increase compared with the previous week, when approximately 2,873 HHs were recorded as newly displaced. This brings the total number of newly displaced recorded since 1 January 2026 reach 191,064 individuals (31,844 HHs).

MAP 1. DISPLACED HHS BY LOCATION OF DISPLACEMENT AND DISTRICT OF ORIGIN

DISPLACEMENT FLOWS BY ORIGIN AND DISPLACEMENT GOVERNORATES

A total of 21,798 IDPs were recorded during the reporting period, with 100 per cent (3,628 HHs) forced to flee due to conflict, particularly conflict in the West Coast. Ta'iz, Al Hodeidah, and Lahj governorates contributed 21,516 individuals, (approximately 99%) to the total figure of newly displaced during this period.

Seventy-eight per cent of the displaced population (17,028 individuals) were hosted in Ta'iz Governorate, followed by Lahj Governorate, with 2,946 individuals (14%), and Aden Governorate, with 954 individuals (4%). Additional displacement was recorded in Shabwah, with 228 individuals (1%); Ma'rib, with 228 individuals (1%); and Hadramawt, with 216 individuals (1%). The remaining 198 individuals (1%) were displaced to Al Maharah, Ad Dali, and Al Bayda governorates.

1. The figure brings the cumulative IDPs recorded due to conflict in the West Coast reach 175,201 individuals (29,199 households) since the escalation began in June 2026.
2. IOM DTM estimates that one household (HH) represents six individuals.

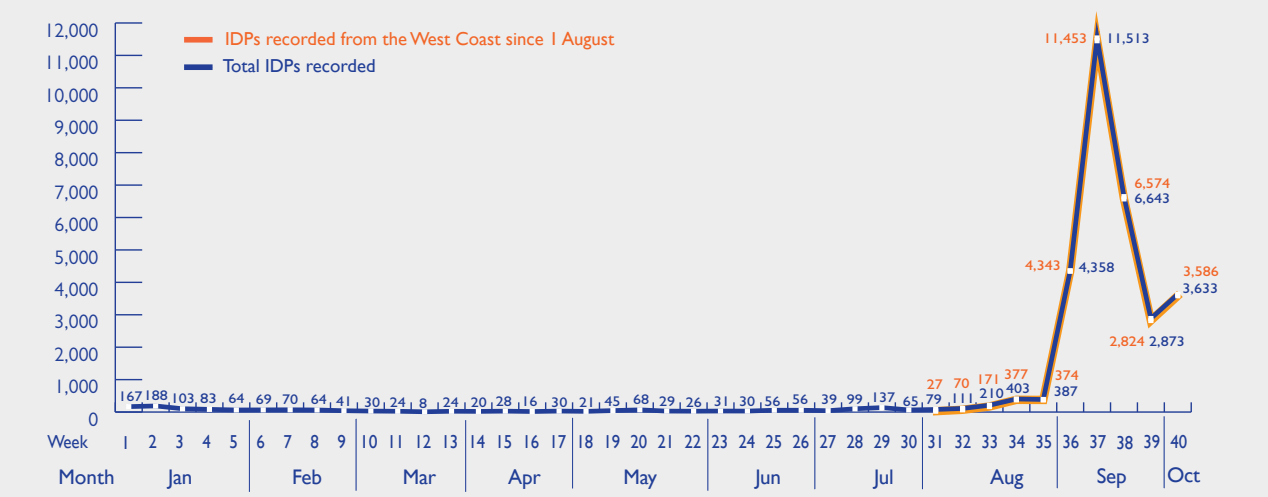

RDT activities are supported by: Canada, Sweden Sverige

PRIMARY NEEDS OF IDPS

The newly displaced persons indicate continuous need of financial resources, food and shelter assistance to cope with their displacement conditions. Financial support highlighted as the most common primary needs, reported by 55 per cent of IDPs (12,036 individuals), followed by food assistance at 34 per cent (7,392 individuals). Shelter was reported as primary need by 10 per cent of IDPs (2,238 individuals) while the remaining (132 individuals) reveal non-food items as their primary needs.

- 12,036 individuals — Financial Support
- 7,392 individuals — Food Assistance
- 2,238 individuals — Shelter
- 132 individuals — Non-Food Items (NFI)

WEEKLY TRENDS OF DISPLACEMENT

PROTECTION ANALYSIS

Rapid protection assessment conducted in three displacement sites in Marib during the reporting period found that the lack of safe shelter remains the most visible vulnerability factor. Some assessed households reported having no shelter and sleeping in the open, which exposes them to violence and to the effects of the conflict, such as airstrikes. Women and girls raised the shortage of appropriate latrines as a concern.

Approximately 45 per cent of assessed households had experienced displacement before. Repeated displacement, loss of assets and unstable livelihoods have reduced households' ability to cope, and the prospect of another eviction is increasing fear and uncertainty. In these conditions, households may turn to negative coping strategies, including child labour. 63 per cent of assessed households reported missing birth certificates or education documents, which prevents school registration and may lead to prolonged dropout. Where disrupted education is compounded by household income loss and repeated displacement, children may face increased exposure to child labour and other protection risks.

The assessment also identified individuals facing multiple and intersecting vulnerabilities including persons with disabilities, female-headed households, children and older persons. The overlap of these vulnerabilities, often compounded by repeated displacement and prolonged exposure to conflict, may further reduce individuals' ability to access services, highlighting the need for protection-sensitive sectoral assistance that identifies and responds to intersecting vulnerabilities on the basis of do no harm principle.

Methodological Note: In Yemen, DTM implements Rapid Displacement Tracking (RDT) to collect data on the number of Yemeni households (HHs) forced to flee on a daily basis due to conflict, natural hazards or other reasons in accessible areas. Through interviews with well-established key informants, the RDT team captures and reports the estimated number of newly internally displaced persons (IDPs) and IDP returnees. This allows DTM to provide regular information on new displacement incidents in terms of location, priority needs and access to services such as health services. Please note that findings are limited to Yemen's south area administered by the Government of Yemen (GoY).

The RDT output provides timely and actionable data on new population movements only and does not capture total numbers (stock) of IDPs or returnees. RDT also does not capture whether displacement is new or repeated (households displaced from another displacement location).
